## Abstracts

Gas Process Filters are used for removal of solid particles, contaminants and other foreign substances in gas. Fluid or particulate contaminations of gas can significantly impair the service life of major components of systems and plants. Therefore, this can result in costly maintenance and repair work, or even complete downtime. Indeed, the aim is the reliable removal of particles (sand, dust, abrasion, paraffin, asphaltene, etc.) and fluids (aerosols, oil mist, condensate, etc.).

Gas process filter is known throughout industry as the service life assurance for major components of systems and plants, reducing the risk of leaks from forming.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Gas Process Filters market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
