Abstracts

Glycidyl methacrylate (GMA) is an ester of methacrylic acid and glycidol. It is a common monomer used in the production of epoxy resins. GMA is also a high purity, dual functionality monomer ideally suited for coating and resin applications. The Glycidyl Methacrylate market has been expanding at a significant pace primarily due to the growth in polymer and adhesives industries. Epoxies contain diglycidyl ether of bisphenol A (DGEBA), while GMA is used to provide epoxy functionalization to polyolefins and other acrylate resins.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Glycidyl Methacrylate (GMA) market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
