Abstracts

GNSS Antennas are the main interface between the GNSS satellite constellations and GNSS receivers. They capture the L-band signals transmitted from space, which is the waveband used by many GNSS satellites constellations for broadcasting. Since more and more applications like Precision Agriculture rely on accurate positioning, GNSS Antennas are becoming increasingly important for achieving the best possible results. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the GNSS Antennas market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the GNSS Antennas industry.

Based on our recent survey, we have several different scenarios about the GNSS Antennas YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ xx million in 2019. The market size of GNSS Antennas will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
