## Abstracts

The GPS Oceanographic Monitoring System, which can measure the height of tsunami waves in real-time from a distance, is mainly used to monitor earthquakes, tsunamis, hurricanes, floods and so on in order to prevent and mitigate the damage caused by disasters. It will play an important role in the prediction of global tsunamis in countries with a history of tsunami events, such as Chile and Indonesia.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the GPS Oceanographic Monitoring System market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
