Gram staining is a screening test used to distinguish the bacterial species into gram positive and gram negative which would help in the diagnosis of different diseases. Over the years, manual staining process has been deployed in labs. However, recently there is development of automated staining system that is used to overcome traditional procedures that lacks reliability and accuracy.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
