## Abstracts

This report focus on grenade launchers market. A grenade launcher is a weapon that fires a specially-designed large-caliber projectile, often with an explosive, smoke or gas warhead.

Grenade launchers are a form of portable firepower available to infantry units, allowing them augment the basic assault rifle. Unlike the RPG, the grenade launcher uses an High-Low propulsion launching system to reduce the recoil and are effective in the 400 meters range. These can be a stand alone system like the M79 or be an multi-launcher, like the MGL, or even the most popular form, the underslung single-grenade launcher. The most used and famous of the assault rifle underslung grenade launchers is the M203 40x46mm. Some armored fighting vehicles also mount fixed arrays of short range, single-shot grenade launchers as a means of defense.

Grenade Launchers are heavy weapons designed to provide high-explosive fire support, meant to fill the gap between the longest range of hand-thrown grenades and the shortest range of infantry mortars or other artillery. They are widely used by the military infantry units for this role. Police forces also use grenade launchers, especially to fire tear gas or flash-bang grenades during riot control and hostage-rescue operations.
