This report focus on Hazardous Environment Cranes market. A crane is an item of plant used to raise or lower a load and move it horizontally. Cranes and hoists often operate in hazardous, dangerous and potentially explosive areas, where a single incident can cause significant personal injury, damage, downtime and loss of income or production. It is therefore important to take steps to ensure crane safety, particularly in environments where there are flammable substances, chemicals, vapours, gases from liquids, volatile substances and dust.

Increasingly high safety operational requirements will be the core driver of the industry's development.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Hazardous Environment Cranes market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Hazardous Environment Cranes industry.
