Abstracts

Hemoglobinopathy or Hemoglobinopathies is the medical term for a group of blood disorders and diseases that affect red blood cells. It can be a kind of genetic defect that results in abnormal structure of one of the globin chains of the hemoglobin molecule. Increasing cases of hemoglobinopathies, especially in regions such as Southeast Asia and Africa, is one of the major growth drivers.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Hemoglobinopathies market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Hemoglobinopathies industry.

Based on our recent survey, we have several different scenarios about the Hemoglobinopathies YoY growth rate for 2020.
