Abstracts

High Pressure Grinding Rollers (HPGR) are comminution equipment that are primarily operated in cement and limestone plants. However, recently HPGR are also being used in mineral, iron ore and diamond treatment plants over the conventional technologies by semi-autogenous grinding (SAG) mills and ball mills. HPGR has considerable number of advantages such as less energy consumption, low operating cost and high throughput rates.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
