Most tap and well water contain moderate to heavy levels of contamination from industrial and environmental pollution. All sources of water whether it be a lake, river, glacier or well, contain some level of contamination. Contaminants range from naturally occurring minerals to man-made chemicals and by products. A Home Water Filtration Unit can solve a wide range of problems affecting the water quality, taste, or appearance of the water. Whole house filtration systems remove contaminants from water through a filter connected to water line. All of the water coming into house will pass through the filter before being routed to faucets, toilets and appliances in the house.

In recent years, the market has gained immense traction as a result of changing lifestyle, especially in urban areas. Scarcity of drinking water has obligated the domestic authorities to provide the population with an adequate supply of the same.
