A hybrid flash array is a solid-state storage system that contains a mix of flash memory drives and hard disk drives (HDDs). Hybrid flash arrays employ form factors and electrical interfaces that are compatible with common HDD bays. This enables a gradual replacement of spinning hard disks with solid-state drives (SSDs) if desired.
Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
