Access control is a security technique that can be used to regulate who or what can view or use a resources environment, whereas Identity is a set of attributes related to an entity that computer systems use to represent a person, organization, application, or a device. In fact, there is a direct relationship between access control and identity management because the core function of an identity management solution is access control.
The same identity can be associated with multiple accounts (representations of a user within the system) and identifiers (how a user is labeled). For example, you may have multiple email accounts that belong to one identity (person, organization or device).Authentication is the process used to determine whether the user is who they claim to be. Once the user is authenticated, authorization determines whether the user is allowed to access a particular resource or take a specific action.
Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Identity Management and Control market in 2020.
COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
This report also analyses the impact of Coronavirus COVID-19 on the Identity
