Abstracts

Infra-red Sensor Faucet is an automatic faucet, incorporate an active infrared sensor to detect hand motion and mechanism that opens its valve to allow water to flow in response to the presence of a hand or hands in close proximity. The faucet closes its valve again after a few seconds or when it no longer detects the presence of hands. Automatic faucets are common in public washrooms, particularly in airports and hotels. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
