## Abstracts

Whipping agents are well-known products in the food industry. Whipping agents or aerating agents are typically spray-dried compositions comprising fat, one or more emulsifiers, carbohydrates and protein. These powdered compositions are most often used in the preparation of instant desserts, cake filling, ice cream, etc. For example, such desserts are prepared by adding a liquid, e.g. milk, to the instant powder and subsequently whipping the mixture, resulting in a whipped topping. These whipped toppings have a certain stability over time, in which the shape of the whipped topping is substantially retained. These types of instant desserts generally comprise besides the whipping agent and the liquid also sugar, texturizing agents such as hydrocolloids, coloring agents and flavoring agents.
