An intelligent manhole cover management system (IMCS) is one of the most important basic platforms in a smart city to prevent frequent manhole cover accidents. The system is comprised of a monitoring device that is attached to manhole covers, a data concentrator and a software platform.

A large number of manhole covers, which are widely distributed throughout the city, are hard to supervise. The loss or damage of manhole covers might influence the drainage facilities and pose a threat to the safety of pedestrians. The intelligent manhole cover management system (IMCS) can monitor manhole covers in real time, and if it detects an abnormal opening, it will transfer the data to the urban management monitoring network for instant action.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
