## Abstracts

An inverter Schmitt trigger is a device that converts any form of an input signal into a digital output signal, so it can function both with digital inputs as well as analog. The advantage of an inverting Schmitt trigger is that it is also a hysteresis device, meaning that whatever signal is being outputted at the current moment has an effect on any future output. This means that there is not a proportional or constant output for any one input state. In a Schmitt trigger, there is a wide range of input signals that can result in one of two different output states.

For an inverting Schmitt trigger, there is a high and low output state possible at any one time. When the input signal produces a voltage that crosses a certain high voltage threshold, the circuit goes to its low voltage output state and remains at that state until the input signal reaches a certain low voltage threshold, at which point the output will switch to a high voltage and remain there until another threshold is reached. This means that the Schmitt trigger's output is completely immune to any input changes as long as the voltage of the input signal lies between the upper and lower voltage thresholds.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Inverter Schmitt Trigger market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the

supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
