Abstracts

IP geolocation software matches an IP address to a geographic location or geolocation. Every device with internet access has an IP address. This address often indicates the general geolocation of the device. In some cases, an IP address is associated with a specific company. Businesses use IP geolocation to prevent fraud, identify sales leads, deliver regional content, and more. Vendors of IP geolocation software often have proprietary algorithms for determining IP geolocation. They often offer an API for customized access to their service. Vendors may also provide databases of IP addresses linked to suspicious activity, fraudulent access, or anonymizing services. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
