## **Abstracts**

IT Asset Management software is designed to inventory all the hardware and software within an organization to aid decision-making regarding hardware and software purchases and redistribution. Typically, inventory, financial and contractual data is discovered and maintained in a central repository. This helps with monitoring assets throughout their entire lifecycle. Requests to purchase assets are handled through approval workflows. The software handles acquisition details such as entitlement, chargebacks, and provisioning. Post-deployment, all maintenance activity is recorded and audits are performed until assets are retired from service.
