Abstracts

IT vendor risk management (VRM) is the process of ensuring that the use of external IT service providers and other IT vendors (third parties) does not create unacceptable potential for business disruption or have a negative impact on business performance. IT VRM solutions support enterprises that have to assess, monitor and manage their exposure to risks arising from their use of third parties that provide IT products and services or that have access to their information. Some solutions' capabilities extend to fourth parties and subcontractors — a feature increasingly important to customers. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the IT Vendor Risk Management market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the IT Vendor Risk Management industry.
