## Abstracts

Biochips are collections of tiny test sites (microarrays) arranged on a solid substrate, allowing many tests to be performed simultaneously for higher throughput and speed. Normally, the surface area of a biochip is no larger than a fingernail. Just as computer chips can perform millions of mathematical operations in a second, biochips can perform thousands of biological reactions, such as decoding genes, in a matter of seconds.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Lab-on-a-chip and Microarrays(BIOCHIP) market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
