Abstracts

Laboratory Benchtop Centrifuges are the laboratory equipments which are used for the separation of substances in a liquid medium by density. These are most commonly used for separation of particulates in suspension. Benchtop centrifuges are rapidly used for the purpose of chromatography, sedimentation, and filtration of samples such as proteins, tissues, DNA/RNA, and cells in clinical and research laboratories. Benchtop centrifuges are compact in size and can easily fit into minimum space in the laboratories.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Laboratory Benchtop Centrifuge market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
