Abstracts

A laser welded blank (LWB – also known as a tailored blank) is a sheet of steel which combines several different grades. Each grade can have different thicknesses and/or coatings. LWBs allow a part to be engineered for optimal performance and lightweighting. The separate grades are laser welded together to create a single sheet of steel which has the best grade in the best place for strength and deformation. Each sheet can be hot- or cold-stamped to give the part its final shape.
