## Abstracts

Latches are simple electronic component, which is designed to hold a memory state within its parts. They are also part of the bistable multivibrator family, which means that the output can maintain a steady state in two different voltage outputs. It also means that the output voltage is dependent on both what the current output state of the latch is as well as what the current input state is. The combination of these two in some way determines what the new output is going to be, but they are interdependent.

The simplest latches are SR flip-flop. It consists of two NOR gates with one of their inputs connected to the output of the other. The other inputs are referred to as the SET and RESET inputs. When a SET pulse (high voltage) is passed to the latch, the output goes high and stays there even if the SET input goes to 0. The output will only change if the RESET pulse is set high, in which case the output becomes 0 until SET is high again. This behavior is a bistable multivibrator operation since the input can change and not affect the current output. Latches are often part of a volatile memory board, which means that it only functions with actively driven inputs. Without that the state of the flip-flops cannot be guaranteed or preserved.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Latches market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the

supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Latches industry. Based on our recent survey, we have several different scenarios about the Latches YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ xx million in 2019. The market size of Latches will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
