## Abstracts

Lightning protection products deliver complete protection against lightning risk, safeguard critical equipment along with transient overvoltage protection with an effective, low resistance route from lightning protection system to earth. The function of lightning protection products is to intercept, conduct, and disperse lightning strikes safely to the earth's surface and without such product building structure, electrical systems are all at high risk. Lightning protection products can prevent from lost or destroyed data, repair work mainly costly for remote or unmanned installations, equipment damage, loss of essential services, and fire & electric shock hazards. The main components of lightning protection systems are rods, cables, and air terminals that work together to carry immense current away from the structure, prevent fire, and most appliance damage.
