Lightweight aggregates (LWA) are defined as construction materials that have a bulk density lower than that of common construction aggregates. The lightweight aggregate is made up of light coarse aggregate, light fine aggregate or ordinary fine aggregate, cement, water, admixture, and admixture, and can be used as concrete. It is often named after the types of lightweight aggregate used, such as pumice concrete, fly ash ceramsite concrete, clay ceramsite concrete, shale ceramsite concrete, expanded perlite concrete, etc.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
