Abstracts

Liquid Sodium aluminate, which is a transparent or yellowish viscous liquid, can be stable for a longer period of time, and has the remarkable advantages of low dosage, good performance, no crystallization, no precipitation, and high strength, etc. It is suitable for shotcrete and anchor work in the construction of Silica fume, railway, subway and highway tunnels, and for the concrete projects which need reinforcement urgently in mines and buildings, especially for wet shotcrete. The utility model has the advantages of quick condensation effect, small rebound amount, less pollution on the working surface and the like.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
