Synthetic rubbers (elastomers) are long-chain polymers with special chemical and physical as well as mechanical properties. These materials have chemical stability, high abrasion resistance, strength, and good dimensional stability. Many of these properties are imparted to the original polymer through crosslinking agents and additives. Liquid Synthetic Rubber are low molecular weight, liquid polymers of synthetic rubber. Increasing demand for isoprene, butadiene, and styrene butadiene across the globe in tire manufacturing, adhesives, sealants and coatings, and industrial rubber products manufacturing is expected to drive growth.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
