## Abstracts

Logic comparators are the workhorse components of modern digital electronics and logic design. They become a key building block in digital logic circuit design and are used in several other key building block logic circuits.

A logic comparator is made by two AND gates, two inverter/NOT gates, and one NOR gate to be. It takes two inputs and compares the two inputs and produces an output, based on the condition or values of the two inputs.

Two common types of digital comparators exist, an Identity comparator and a Magnitude comparator. An identity comparator only has one output, whereas a magnitude comparator has three outputs. The magnitude comparator can detect whether the inputs are greater than, less than or equal to each other.

A similar circuit exists in the analog domain, known as a voltage comparator. Two input voltages are compared, and the output responds depending on the condition of the two inputs. This allows one to know if the input is greater than that of a reference voltage or lower than that of a reference voltage. This concept of comparing two or more inputs is very useful and is used in every single computer, which exists today.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Logic Comparators market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the

supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
