Abstracts

Malleable iron is cast as white iron, the structure being metastable carbide in a pearlitic matrix. Through an annealing heat treatment, the brittle structure as first cast is transformed into the malleable form. Carbon agglomerates into small roughly spherical aggregates of graphite leaving a matrix of ferrite or pearlite according to the exact heat treatment used. Malleable iron is mainly used in the device that need the small casting with require good strength and elastic, such as power devices, portable tools, plumbing fixtures, etc.
