Abstracts

The medical telemonitoring system is the system to measure vital signs remotely and to manage escalation strategies based on pre-determined rules applied on the measured data. Data transfer can be achieved via wireless communication means and or data transfer over other media, such as a telephone or computer network or via an optical link. The telemonitoring system improves patient visibility and interaction, which is beneficial at any point of the care continuum.
Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Medical Telemonitoring System market in 2020.
