Abstracts

A membrane dryer is a unique and efficient way to remove various contaminants from an existing compressed air system, and lowers both the dew point and the relative humidity all at the same time. The membrane dryer is a progressive system of filtration media, designed to work with your existing compressed air system. The membrane dryer consists of a unique four stage filtration system. This system progressively cleans the compressed air from liquids and other contaminants. With an automatic moisture discharger located under the second stage filter, any liquids removed will be expelled once an ounce of liquid is collected.
