The microelectromechanical systems accelerometer is a mixture of physical acceleration sensing any object due to inertial forces or automatic and programmed excitation. It is an electromechanical device used to calibrate acceleration forces, while MEMS gyroscopes are tools or devices used to control angular motion of mechanical objects.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the MEMS Accelerometers and Gyroscopes market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the MEMS Accelerometers and Gyroscopes industry.
