This report focus on Metal Bellow Forming Machine market. Metal bellows are elastic vessels that can be compressed when pressure is applied to the outside of the vessel, or extended under vacuum. When the pressure or vacuum is released, the bellows will return to its original shape. Various forming methods are applied in the production of corrugations of metal bellows, depending on the nominal diameter, the material and the quantity of the metal bellows. Various methods can be applied to create the corrugations using mechanical, hydraulic means or rubber forming.

The development of industrial automation has promoted the technology upgrade of the metal bellow forming machine industry.
