Abstracts

This report focus on Micro Nuclear Reactors (MNRs) market. Micro Nuclear Reactors (MNRs) are a distinct class of small reactor systems, typically of under 30MW electricity and 100MW thermal output, which are expected to occupy distinct and different market niches, in comparison to larger Small Modular Reactors (SMR's).

Although some MNR designs have evolved from LWR technology, MNRs are typically not water cooled or water moderated. They use a compact reactor and heat exchange arrangement, frequently integrated in a single reactor vessel. They are designed to be factory manufactured in large functional units largely eliminating the need for costly and complex nuclear critical assembly work on site.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Micro Nuclear Reactors (MNRs) market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Micro Nuclear Reactors (MNRs) industry.
