Abstracts

This report focuses on MPO Fiber Optic Patch Cord market.

Fiber patch cords are used to make patch cords from the device to the fiber optic cabling link. MPO Fiber Optic Patch Cord uses MPO connector. MPO Fiber Optic Connectors (Multi-fiber push on connectors, or MPOs for short), are fiber connectors comprised of multiple optical fibers. While defined as an array connector having more than 2 fibers, MPO Connectors are typically available with 8, 12 or 24 fibers for common data center and LAN applications. Other fiber counts are available such as 32, 48, 60 or even 72 fibers, but these are typically used for specialty super high-density multi-fiber arrays in large scale optical switches.

There is a thick protective layer, which is generally used in the connection between the optical transceiver and the terminal box, and is applied in some fields such as a fiber-optic communication system, a fiber access network, an optical fiber data transmission, and a local area network.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
