## Abstracts

Multiplex PCR, also known as multiplex primer PCR or multiplex PCR, is a PCR reaction in which more than two pairs of primers are added to the same PCR reaction system, and at the same time, multiple nucleic acid fragments are amplified. The Reaction Reagent and the operation process are the same as the ordinary PCR. In general, PCR only uses a pair of primers and produces a nucleic acid fragment by PCR amplification, which is mainly used for the identification of single pathogenic factor. Multiplex PCR is mainly used to detect and identify some pathogenic microorganisms, some genetic diseases and genotyping of oncogenes.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Multiplex PCR Assays market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
