Abstracts

Neuro Emotional Technique (NET) is a psycho-emotional therapy based on the physiological foundations of stress-related responses. As discovered in the late 1970's, emotional responses are composed of neuropeptides (amino acid chains) and their receptors, which lie on neurons and other cells of remote tissues in the body. The neuropeptides are ejected from the neuron and carry the encoded "information" to other sites within the body. These neuropeptides are in a category of neurochemicals known as Information Substances (IS). ISs are released at times of stress-related arousal and become attached to remotely-positioned neuroreceptors.
