## Abstracts

Nano-material refers to the macro-material formed by nano-structure piled up in a certain way or dispersed in a certain matrix. Non-polymer organic nanomaterial is a kind of nanomaterial classified from the category of matter, that is, the main body of which is organic matter and is not polymer. In terms of size, the particles that typically produce significant changes in the properties of physical chemistry are below 0.1 microns, or 100 nanometers.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Non-polymeric Organic Nanomaterials market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
