Abstracts

Obesity is a medical condition caused by an increase in fat cells in the body, which can have a negative impact on health. High blood pressure, high cholesterol and heart disease are serious medical conditions associated with obesity. Obesity also increases the risk of certain diseases, such as type 2 diabetes, osteoarthritis, obstructive sleep apnea, and depression. If diet or exercise is not effective, obesity intervention devices can be used to reduce the size of the stomach or the length of the intestine, thereby reducing the ability to absorb nutrients from food.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
