## Abstracts

Oligo Synthesizers are machines used to custom-build DNA molecules to contain a particular sequence of nucleotides. Oligo Synthesizers can create specific DNA molecules for use in the treatment of a variety of diseases by replacing a faulty or damaged section of DNA with a repaired section.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Oligo Synthesizer market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
