## Abstracts

This report focus on Online Dissolved Gas Analyzer. Dissolved Gas Analyzer is used to determine the concentrations of specific gasses dissolved in the oil. Insulating materials within transformers and electrical equipment break down to liberate gases within the unit. The distribution of these gases can be related to the type of electrical fault, and the rate of gas generation can indicate the severity of the fault. The identity of the gases being generated by a particular unit can be very useful information in any preventative maintenance program.

Monitoring the dissolved gas levels in transformer oil samples is a useful, trusted maintenance tool for assuring optimal asset health. However, conventional manual methods are periodic and expensive, while online-real-time monitoring solutions are more proactive and lower cost in the long-term.
