Abstracts

The operational database management system (OPDBMS) market is defined by relational and nonrelational database management products suitable for the traditional transactions used to support business processes. These include a broad range of enterprise-level applications — both purchased business applications, such as ERP and CRM applications, and custom-made transactional systems. Our definition of this market also includes DBMS products that support interactions and event processing (data in motion) uses for the Internet of Things (IoT). OPDBMSs may support multiple different delivery models, such as stand-alone DBMS software, cloud (public and private) images or containerized versions, certified configurations and database appliances.
Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Operational Database Management Systems (OPDBMS) Software market in 2020.
COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
This report also analyses the impact of Coronavirus COVID-19 on the Operational Database Management Systems (OPDBMS) Software industry.
