## Abstracts

Polycrystalline materials, are solids that are comprised of a collection of crystallites (grains), separated from one another by areas of relative disorder known as grain boundaries. The assemblage of grains of various shapes and sizes, together with the potential presence of porosity and secondary phases, constitute the ceramic microstructure. Many of the physical properties of ceramics are microstructure dependent, as are its optical properties. In order to collect the maximum light output, the emission and absorption spectra of a scintillator material have to be well separated. This means that the scintillator material has to be transparent at its emission wavelength. Optical transparent ceramics are transparent polycrystalline materials that can be used as an alternative to single crystals scintillators. These are produced by ceramic fabrication methods. The advantage of optical transparent ceramics is the possibility of production of reasonably priced and large sized materials for large area detection. Fabrication techniques are also much less time consuming than that of single crystals.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Optical Transparent Ceramics market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events

restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Optical Transparent Ceramics industry.
