Abstracts

An anti-graffiti coating is a coating that prevents graffiti paint from bonding to surfaces. Permanent anti-graffiti coatings are often more expensive than sacrificial coatings, but if used appropriately only have to be applied once. These work by creating a protective surface that spray paint cannot bond to. After the surface has been vandalized, often all that is needed to remove the paint is a simple solvent (toluene) and some manual labor. The underlying surface and the protective coating will remain undamaged.
