Oxygen barrier cross-linked polyethylene (PEX) pipe used for radiant in-floor and hydronic heating applications. Flexible pipe reduces the number of connection points -- reducing cost, time and potential leak points. The oxygen diffusion barrier applied to the exterior limits oxygen permeation through the piping wall in hydronic heating applications which prevents corrosion of ferrous metal parts in the heating system. The research process involved the study of various factors affecting the industry, including the government policy, market environment, competitive landscape, historical data, present trends in the market, technological innovation, upcoming technologies and the technical progress in related industry, and market risks, opportunities, market barriers and challenges.
