Physisorption analyzers may use liquid or gas molecules to interact with the solid sample. Some are able to measure much smaller pores than others, and some have additional chemisorption abilities that allow for other types of surface analysis. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Physisorption Analyzers market in 2020.
