## Abstracts

PLA fiber is a non-toxic, sustainable alternative to petroleum-derived products. It's also an excellent alternative to wool, since it's hypoallergenic and performs well in the wash. PLA fiber provides a soft and comfortable feel, wicks away moisture, and resists body impressions.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the PLA Fiber market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
