Abstracts

Pod drives are a marine power system that eliminates the need for shafts, struts, and rudders. Instead of using traditional running gear to transfer the engine's power into thrust, a 'pod,' consisting of the transmission, outdrive, and propeller, is mounted right through the bottom of the boat.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
