## Abstracts

Polyvinylidene Fluoride (PVDF) pipe, also known as Kynar®, is used in chemical and industrial applications requiring excellent chemical resistance and/or higher temperatures. Of all the commonly used piping systems, PVDF is the most chemically resistant, handles the highest temperature (up to 275°F) and has the lowest flame and smoke development characteristics. It is typically joined by heat fusion and is used for applications involving chemicals, nuclear waste, food and pharmaceutical processing and ultra high purity water systems.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
