Abstracts

This report focus on Powered Paragliding Training market. Powered paragliding, also known as paramotoring or PPG, is a form of ultralight aviation where the pilot wears a back-mounted motor (a paramotor) which provides enough thrust to take off using a paraglider. It can be launched in still air, and on level ground, by the pilot alone — no assistance is required. Powered Paragliding can be learned in a certified school only, under the supervision of a qualified instructor.

Powered paragliding is probably the safest form of recreational aviation ever devised. Get good instruction, pay close attention during training and respect the propeller to minimize most of the risk. Like any recreation with humans in motion, there is risk. Training and the first few hours of flight are the most critical. Of the minimal risk, most comes from pilot error, not equipment malfunction. A conscientious pilot with the right attitude and good instruction can make this sport incredibly safe.
